

DAVIDE FIORINA

davide.fiorina@gssi.it · 31/08/1994

Viale Francesco Crispi 7, L'Aquila (AQ) 67100 Italy

I am an experimental particle and astroparticle physicist with a strong detector-instrumentation profile, working across the full lifecycle of an experiment: physics case, detector concept, hardware construction, simulation, reconstruction, commissioning, data taking, and operations. My expertise focuses on gaseous detectors, Micro-Pattern Gaseous Detectors, optical time projection chambers, and fast-timing technologies. My work combines hands-on detector development, analysis and simulation software, and technical management of complex experimental systems.

I am currently a postdoctoral researcher at the Gran Sasso Science Institute (GSSI) and Technical Coordinator of the CYGNO directional Dark Matter experiment at LNGS. I lead the transition from the LIME R&D prototype to CYGNO04, a 400 L radiopure physics demonstrator and the largest directional dark-matter detector currently under construction. In this role, I coordinate detector design, procurement, integration, installation, and commissioning, managing physicists, engineers, technicians, industrial suppliers, LNGS services, schedules, and detector budget of about 1 M€.

Within the HypeX project, I am also developing large-volume triple-GEM TPCs with optical readout for hard X-ray polarimetry, building a research line that bridges underground Dark Matter instrumentation and high-energy astrophysics. Previously, as a CERN Project Associate and INFN postdoctoral researcher in the CMS GEM group, I contributed to the CMS triple-GEM muon-system upgrade and led the Picosec Micromegas R&D programme for the Muon Collider, from detector simulation and beam-induced-background studies to prototype development and test-beam validation.

Education

- **2022 - PhD - Università degli Studi di Pavia** — PhD in Physics of Fundamental Interactions. Thesis title: “**R&D on Triple-GEM detectors for the optimal and safe operation in the CMS experiment**”. Final evaluation: Eccellente. Supervisor: Prof. Paolo Vitulo.
- **2018 - Master's Degree - Università degli Studi di Pavia** — Master's Degree in Nuclear Physics, LM-17. Thesis title: “**Advanced Aging Study on Triple-GEMs for GE2/1 & ME0**”. Final mark: 110/110 cum laude. Supervisor: Prof. Paolo Vitulo.
- **2016 - Bachelor's Degree - Università degli Studi di Pavia** — Bachelor's Degree in Physics, L-30. Thesis title: “**Measurement of γ -rays coherent cross section in lead**”. Final mark: 101/110. Supervisor: Prof. Paolo Vitulo.

Academic Appointments

- **2023–present - GSSI, Gran Sasso Science Institute - Postdoctoral Researcher** — Technical Coordinator, Site Manager, GLIMOS, and RAE of the CYGNO experiment at LNGS, leading the procurement, assembly, and commissioning of the 400 L CYGNO04 demonstrator. Also active in R&D for optical-readout GEM TPCs for X-ray polarimetry, in orbit background simulations, and negative-ion-drift R&D.
- **2022–2023 - CERN - Project Associate** — Selected through a competitive Project Associate call for CMS GEM commissioning and Muon Collider detector R&D. Activities covered on-site CMS operations, CMS Phase-2 GEM upgrade work, and fast timing muon-detector development for the Muon Collider detector.
- **2021–2023 - INFN Pavia - Postdoctoral Researcher** — Worked on CMS GEM integration and ME0 R&D, with focus on gas-system coordination, discharge mitigation, and magnetic-field operation. Also contributed to PICOSEC Micromegas fast-timing R&D for Muon Collider applications.

Scientific Responsibilities

- **Apr 2026–present - CYGNUS proto-collaboration** — Optical Readout Coordinator for the CYGNUS large-volume directional-detector proposal at Super-Kamiokande.
- **Apr 2025–present - EXPO ESA M8 mission proposal** — Coordinator of the in-orbit background simulation activities for the EXPO instrument team.
- **Nov 2024–present - CYGNO experiment** — **Technical Coordinator, Site Manager, GLIMOS, and RAE** of the CYGNO experiment.
- **Nov 2024–present - CYGNO Collaboration** — Member of the Steering Committee.

- Mar 2024–present - **CYGN0 Collaboration** — Member of the Publication Committee.
- Mar 2022–Mar 2023 - **CMS GEM Collaboration** — R&D Test-Beam Coordinator for the CMS GEM group.
- Nov 2021–Sep 2023 - **Muon Collider Detector R&D** — R&D Coordinator of the PICOSEC Micromegas fast-timing technology for Muon Collider detector studies.
- Sep 2020–Sep 2023 - **CMS GEM Collaboration** — CMS GEM Gas System Expert, with L3 responsibility in the CMS GEM organization chart.

Conferences and Bibliometry

- **Updated 25/05/2026 - Scientific presentations** — **24** talks at conferences and scientific events, including 9 at international conferences, 12 at workshops, and 3 at national conferences; 12 posters.
Full list of Talks and posters provided at the end of the CV.
- **ORCID and bibliometry** — **Scopus**: 505 publications, 13647 citations by 6133 documents, h-index 58.

Organization of Scientific Meetings

- **2024 and 2027 - DRD1 Gaseous Detectors School** — Member of the Local Organizing Committee (LOC) and laboratory manager.
- **2025 - CYGN0 Collaboration Meeting** — Head of the LOC.
- **2023 and 2025 - Gran Sasso Hands-on PhD Summer School on Experimental Astroparticle Physics** — Member of the LOC and laboratory manager.
- **2025 - Frontiers in X-ray Polarimetry Academy** — Head of the LOC and member of the Scientific Organizing Committee (SOC).
- **2023 - RD51 Micro-Pattern Gaseous Detectors School** — Member of the LOC and laboratory manager.

Teaching Experience

Students Supervision

- **2023–2025 - GSSI, Gran Sasso Science Institute** — Co-supervisor of **3** PhD students working in astroparticle physics.
- **2020–2023 - Università degli Studi di Pavia** — Supervisor of **1** Bachelor's student and **1** Master's student in experimental particle-detector R&D.
- **2019–2023 - CERN** — Supervisor of **2** CERN Summer Students, each for a three-month project, and **1** CERN Short-Term Internship student for a six-month project.

Lecturing, Tutoring and Laboratory Courses

- **2024/2025 and 2025/2026 - GSSI, Gran Sasso Science Institute** — Lecturer for the PhD course “Laboratory of Low-Energy Radiation Measurement”, Astroparticle Physics PhD programme, GSSI. 12 h/year, $\approx$ 8 students.
- **2023 and 2025 - Laboratori Nazionali del Gran Sasso, INFN LNGS** — Tutor for the laboratory activities of the Gran Sasso Hands-on PhD Summer School on Experimental Astroparticle Physics. 40 h/year, $\approx$ 4 students.
- **2024 and 2025 - CERN** — Tutor for the laboratory course of the DRD1 Gaseous Detectors School. 32 h/year, $\approx$ 30 students.
- **2023 - CERN** — Tutor for the laboratory course of the RD51 Micro-Pattern Gaseous Detectors School. 20 h, 24 students.
- **2019/2020 and 2020/2021 - Università degli Studi di Pavia** — Seminar lecturer for the course “Nuclear and Sub-Nuclear Physics Laboratory 1”, Department of Physics. 12 h/year, $\approx$ 5 students.
- **2018/2019, 2019/2020 and 2020/2021 - Università degli Studi di Pavia** — Tutor for the course “Radioactivity”, Faculty of Medicine and Surgery, Radiology Course. 40 h/year, $\approx$ 50 students.
- **2018/2019, 2019/2020 and 2020/2021 - Università degli Studi di Pavia** — Seminar lecturer for the course “Laboratorio 2”, Department of Physics. 12 h/year, $\approx$ 30 students.
- **2017/2018 - Università degli Studi di Pavia** — Tutor for the course “Laboratorio 2”, Department of Physics. 40 h/year, $\approx$ 30 students.
- **2017/2018 - Università degli Studi di Pavia** — Tutor for the course “Medical Physics”, Faculty of Medicine and Surgery, Harvey Course. 40 h/year, $\approx$ 100 students.
- **2017/2018 - Università degli Studi di Pavia** — Tutor for the course “Physics”, Department of Biology and Biotechnology. 40 h/year, $\approx$ 50 students.

Outreach Activities

- **2026–today - INFN LNGS** — Official INFN LNGS guide, appointed through comparative procedure 81_2025 for paid scientific visits and introductory seminars. $\approx$ 100 visitors guided.

- [2025–today - CYGNO Collaboration](#) — Outreach and social-media coordinator for the CYGNO Instagram channel [cygno.exp](#), with $\approx 20\text{--}60\text{k}$ views/month.
- [2025 - Public seminar](#) — Speaker at the public seminar “Caccia all’invisibile: la materia oscura al Gran Sasso”, Clusone (BG), ≈ 200 participants, 17/12/2025.
- [May 2024–present - Scientific consulting](#) — Physics content advisor for [Pumais Due](#), supporting scientific accuracy in Tv series dubbing.
- [Jan 2021–Sept 2023 - CMS guide](#) — Official CMS guide over and underground. ≈ 100 visitors guided.
- [2016–today - European Researchers Night \(SHARPER\)](#) — Staff member for the activities in Pavia and L’Aquila.
- [2022 - CERN High School Student Internship Programme](#) — Tutor for high-school student activities. ≈ 6 h.
- [2018–2021 - TEN DAYS PHYSICS 4 TEENAGERS](#) — Tutor for high-school physics outreach activities. ≈ 12 h/year.
- [2018–2021 - CMS Masterclass](#) — Tutor for particle-physics masterclass activities. ≈ 8 h/year.

Reviewing Activities

- [Apr 2026–present](#) — Regular referee for [EPJ Techniques and Instrumentation](#).
- [Sep 2025–present](#) — Regular referee for the [Journal of Instrumentation](#).

Competitive Selections

- [Mar 2026 - Sapienza University of Rome](#) — Shortlisted candidate for the tenure-track Assistant Professor selection, Bando 2025RTTE011, GSD 02/PHYS-01.
- [Nov 2025 - INFN](#) — Finalist in the Italian national competition for permanent Researcher, Level III, TI/INFN/R3/27372. Passed the written and oral examinations.

Experimental Operations and Shifts

- [Oct 2023–present - CYGNO experiment](#) — Shifter and expert on call for detector operation, data taking, and technical support.
- [Mar 2022–Sep 2023 - CMS GEM subsystem](#) — Detector On Call for the CMS GEM subsystem.
- [Nov 2019–Sep 2023 - CMS experiment](#) — Technical shifter at the CMS Detector Control System.

Research Activities

R&D activities

- [CYGNO/CYGNUS detector R&D](#) — Development of optical-readout gaseous TPCs for directional rare-event searches, from the 50 L LIME prototype to the 400 L CYGNO04 demonstrator and toward large-scale CYGNUS concepts. Activities include detector design, optimization of the optical and electronic readout strategy, high-gain saturation mitigation, light-yield enhancement, innovative gas mixtures, Negative Ion Drift operation, and scalable optical-readout concepts for future large-volume detectors. Selected publications: [\[15\]](#), [\[11\]](#), [\[9\]](#).
- [X-ray polarimetry detector R&D](#) — Development and testing of triple-GEM optical-readout TPCs for hard X-ray polarimetry within the PRIN2020 HypeX project, adapting CYGNO-like detector technology to high-energy astrophysics. The work focuses on reconstructing low-energy photoelectron tracks with sCMOS imaging, extending polarimetric sensitivity toward the 10 keV–60 keV range, and exploring improvements based on optimized gas mixtures and image-intensified optical readout. Selected publication: [\[16\]](#).
- [PICOSEC Micromegas R&D for the Muon Collider](#) — Coordination of the R&D programme to adapt PICOSEC Micromegas technology to large-area, high-rate, long-term operation for a future Muon Collider detector. Activities include prototype development from a 1 cm² baseline to 100 cm², photocathode studies, Cherenkov-radiator tests, gas-mixture optimization, ion-backflow studies, rate-capability measurements, and scalable readout concepts while preserving sub-100 ps timing performance. Selected publications: [\[13\]](#), [\[12\]](#), [\[10\]](#), [\[6\]](#).
- [CMS GEM detector R&D](#) — R&D on triple-GEM detectors for the CMS muon system, with focus on robustness, stability, and performance in high-background conditions. Work includes aging and radiation-hardness studies, discharge characterization and mitigation, ME0 rate-capability optimization, gas-distribution design, gas monitoring, readout optimization, and mitigation of magnetic-field-induced instabilities. Selected publications: [\[14\]](#), [\[8\]](#), [\[7\]](#), [\[5\]](#), [\[4\]](#), [\[3\]](#), [\[2\]](#), [\[1\]](#).

Analysis and simulation activities

- [CYGNO detector performance, background, and response modelling](#) — Analysis of LIME data to assess detector performance and operational limits, including pedestal stability, GEM light production, saturation effects, and correlations between optical, PMT, and electronic signals for 3D reconstruction. Contributions include Geant4 radon-background studies, alpha-correlation tagging strategies, and modelling of the non-linear light response of optically readout GEM

TPCs to improve data–MC agreement in the CYGNO simulation pipeline. Selected publications: [15], [11].

- **X-ray polarimetry reconstruction and performance analysis** — Analysis of optical TPC data for X-ray polarimetry through reconstruction of photoelectron-track directions and extraction of polarization-sensitive observables. Activities include indirect modulation-factor studies, direct measurements with fully polarized X-ray beams, comparison with Monte Carlo simulations, and evaluation of detector performance at different X-ray energies. Selected publication: [16].
- **EXPO in-orbit background simulations** — Coordination of Geant4 simulations of the in-orbit background expected in the EXPO polarimetric payload for the ESA M-class mission proposal. Work includes development of the simulation framework, implementation of payload mass-model components, evaluation of space-radiation-induced backgrounds, and contribution to background-rejection and mitigation strategies.
- **Muon Collider/PICOSEC simulations and data analysis** — Simulation of Beam-Induced Background in the forward region of the Muon Collider detector, showing the importance of ultra-fast timing for background rejection. Analysis of laboratory and test-beam data to evaluate PICOSEC timing performance, rate capability, photocathode response, material choices, gas mixtures, and readout configurations. Selected publications: [13], [12], [10], [6].
- **CMS GEM performance, commissioning, and operation analysis** — Analysis of data from CMS GEM R&D, commissioning, and operation campaigns, including GIF++, CHARM, CERN 904, test beams, magnetic-field tests, and Run-3 operation. These studies quantified aging, discharge probability, rate-capability losses, gain stability, gas-system performance, magnetic-field-induced instabilities, and mitigation strategies. Additional contributions include quality control, commissioning, Detector-On-Call shifts, Data Quality Monitoring, and software tools for GEM demonstrators and GE1/1 stations. Selected publications: [14], [8], [7], [5], [4], [3], [2], [1].

Management activities

- **CYGNO technical coordination and LNGS operations** — Since November 2024, Technical Coordinator, Site Manager, GLIMOS, and RAE of the CYGNO experiment, coordinating the transition from LIME to the 400 L CYGNO04 demonstrator. Responsibilities include detector design, procurement, construction, integration, installation, commissioning preparation, safety, environmental compliance, interfaces with LNGS services and industrial suppliers, schedules, and budget-constrained delivery of the CYGNO04 detector project, with procurement and assembly funds of about 1 M€.
- **CYGNO collaboration governance and operational tools** — Member of the CYGNO Steering Committee and contributor to technical, logistical, and strategic decisions for the collaboration. Designed and deployed an AI-assisted management workflow to organize minutes, logbooks, timelines, task lists, and technical notes into a structured operational memory for action tracking, deadline monitoring, blocker identification, and coordination summaries.
- **CYGNUS optical-readout coordination** — Optical Readout Coordinator within the CYGNUS proto-collaboration for the proposed large-volume directional detector at Super-Kamiokande. Coordination of the optical-readout working line within an international effort involving institutes in Italy, Australia, the United States, and Japan, focused on scalable TPC concepts and the physics potential of low-energy directional detection.
- **EXPO background-simulation coordination** — Coordinator of the in-orbit background simulation activity for the EXPO instrument team within the ESA M-class mission proposal. Responsibilities include organizing the simulation work, defining the Geant4 strategy, integrating detector and payload inputs, and producing background estimates relevant to mission optimization.
- **PICOSEC Micromegas R&D coordination** — Coordinator of the PICOSEC Micromegas R&D programme for Muon Collider detector studies, managing a dedicated budget of about 10 k€ and experimental activities from proposal stage to functional prototypes. Activities include laboratory work, test-beam campaigns, material studies, rate-capability measurements, photocathode studies, and scalable readout development.
- **CMS GEM coordination roles** — R&D Test-Beam Coordinator and L3 responsible for the CMS GEM gas system. Coordination of CERN facility access, ME0 prototype validation, gas-system design and commissioning, interfaces with CMS services, operation procedures, and technical decisions required to bring GEM detectors from R&D and production to stable operation in CMS.

Selected Publications

-
- [16] - 2026 — A Large-Area Optical Time Projection Chamber for Hard X-ray Polarimetry with Directional Imaging of Low-Energy Electron Recoils.
 - [15] - 2026 — Modeling the light response of an optically readout GEM-based TPC for the CYGNO experiment.
 - [14] - 2025 — Study on discharge and short-circuit generation in CMS GE1/1 triple-GEM detectors during Run 3.
 - [13] - 2025 — Single-channel PICOSEC Micromegas detector with improved time resolution.
 - [12] - 2025 — Photocathode characterisation for robust PICOSEC Micromegas precise-timing detectors.
 - [11] - 2024 — Enhancing the light yield of He:CF₄-based gaseous detector.
 - [10] - 2024 — A novel diamond-like carbon based photocathode for PICOSEC Micromegas detectors.
 - [9] - 2024 — Charge amplification in low-pressure CF₄:SF₆:He mixtures with a multi-mesh THGEM for directional Dark Matter searches.

- [8] - 2024 — Development of the CMS detector for the CERN LHC Run 3.
- [7] - 2023 — Impact of magnetic field on the stability of the CMS GE1/1 GEM detector operation.
- [6] - 2023 — Towards a muon collider.
- [5] - 2021 — Quality control of mass-produced GEM detectors for the CMS GE1/1 muon upgrade.
- [4] - 2021 — Performance of a triple-GEM demonstrator in pp collisions at the CMS detector.
- [3] - 2020 — Triple-GEM discharge probability studies at CHARM: simulations and experimental results.
- [2] - 2020 — Interstrip capacitances of the readout board used in large triple-GEM detectors for the CMS Muon Upgrade.
- [1] - 2020 — Performance of prototype GE1/1 chambers for the CMS muon spectrometer upgrade.

Presentations at Conferences

- 2026 - [When Spin adds to N²: a proposal to probe the axial side of CEvNS with Fluorine](#) — WHAT ELSE - N² is better than N, LNGS (IT), 15 May 2026. International workshop, invited talk.
- 2026 - [The CYGNO experiment](#) — 9th CYGNUS Workshop on Directional Recoil Detection, Kobe (JP), 23–25 Feb 2026. International workshop, invited talk.
- 2025 - [CYGNO04 Status, Assembly Procedure and Timeline](#) — CYGNO Collaboration Meeting, Clusone (IT), 16–20 Dec 2025. International workshop, invited talk.
- 2025 - [Polarimetry R&D status](#) — CYGNO Collaboration Meeting, Clusone (IT), 16–20 Dec 2025. International workshop, invited talk.
- 2025 - [The CYGNO experiment, a gaseous TPC for directional Dark Matter searches](#) — TAUPP 2025, Xichang (CN), 24–30 Aug 2025. International conference, parallel talk.
- 2025 - [The CYGNO experiment, a gaseous TPC for directional Dark Matter searches](#) — EPS-HEP 2025, Marseille (FR), 6–11 Jul 2025. International conference, parallel talk.
- 2025 - [X-POT: X-ray Polarimetry with Optical Time Projection Chamber](#) — ASAPP 2025, Girona (ES), 12–16 May 2025. International conference, plenary talk.
- 2024 - [The CYGNO experiment, a gaseous TPC for directional Dark Matter searches](#) — MPGD 2024, Hefei (CN), 14–18 Oct 2024. International conference, plenary talk.
- 2024 - [Development and Preliminary Results of a Large-Volume Time Projection Chamber for X-ray Polarimetry](#) — MPGD 2024, Hefei (CN), 14–18 Oct 2024. International conference, plenary talk.
- 2024 - [HypeX: High Yield Polarimetry Experiment in X-rays](#) — SPIE AS24, Yokohama (JP), 16–21 Jun 2024. International conference, parallel talk.
- 2023 - [PICOSEC Micromegas detector for precise muon timing in the Muon Collider detector](#) — FAST 2023, Elba Island (IT), 28 May–1 Jun 2023. International conference, plenary talk.
- 2021 - [Status and commissioning of the new GE1/1 station for the CMS experiment](#) — EPS-HEP 2021, DESY (DE), 26–30 Jul 2021. International conference, parallel talk.
- 2019 - [Aging studies on Triple-GEM detectors for future upgrades of the CMS endcap muon spectrometer at the HL-LHC](#) — IPRD 2019, Siena (IT), 14–17 Oct 2019. International conference, plenary talk.
- 2025 - [A Large-Volume, Extended Field-of-View TPC for X-ray Polarimetry](#) — IFD 2025, Sestri Levante (IT), 17–19 Mar 2025. National workshop, plenary talk.
- 2025 - [Photoelectric polarimeters R&D](#) — FiXP Academy, L'Aquila (IT), 7–11 Apr 2025. International workshop, invited talk.
- 2025 - [Triple-GEM TPC for X-ray polarimetry](#) — 4th DRD1 Collaboration Meeting, CERN (CH), 24–28 Feb 2025. International workshop, parallel talk.
- 2023 - [Status and plans for the study of X-ray polarimetry](#) — CYGNO Collaboration Meeting, Frascati National Laboratories (IT), 4–6 Dec 2023. International workshop, invited talk.
- 2023 - [Study of the pedestal stability](#) — CYGNO Collaboration Meeting, Frascati National Laboratories (IT), 4–6 Dec 2023. International workshop, invited talk.
- 2023 - [PICOSEC for the Muon Collider detector](#) — RD51 Mini-Week, CERN (CH), 27–28 Jan 2023. International workshop, plenary talk.
- 2022 - [PICOSEC Micromegas: a fast-timing gaseous detector for MIPs](#) — IFD 2022, Bari (IT), 17–19 Oct 2022. National workshop, plenary talk.
- 2022 - [Rate capability and high-rate GEM foil optimization for the CMS ME0 detector](#) — RD51 Collaboration Meeting, CERN (CH), 13–17 Jun 2022. International workshop, plenary talk.
- 2021 - [The gas monitoring system for safe operation of the CMS triple-GEM detectors](#) — SIF 2021, Milan (IT), 13–17 Sep 2021. National conference, parallel talk.
- 2020 - [ME0 project for the Triple-GEM upgrade of the CMS muon spectrometer: design, preliminary performance and R&D perspectives](#) — SIF 2020, Milan (IT), 14–18 Sep 2020. National conference, parallel talk.
- 2018 - [Advanced aging study on Triple-GEM for GE2/1 and ME0](#) — SIF 2018, Rende (IT), 17–21 Sep 2018. National

conference, parallel talk.

Poster List

- [2026 - 9th CYGNUS Workshop on Directional Recoil Detection](#) — “Wide-Field Hard X-ray Polarimetry with a Large-Volume TPC”. Kobe (JP), 23–25 Feb 2026.
